How does this Plan work?

As a wealth creator you have the power to choose between 8 fund options. The premium contributions made by you, net of Premium Allocation Charges are invested in funds of your choice. The units are allocated depending on the price of units for the funds. The Fund Value is the total value of units that you hold across all the unit-linked funds.

Guaranteed Addition of 2.5% of annualised premium paid during the year will be added at the end of each year from fourth policy year onwards till the death of the life assured or until the maturity of policy, whichever is earlier provided all due regular premiums are paid. Guaranteed addition will be added in the form of units to the fund value at prevailing unit price. If the regular premium is discontinued, guaranteed additions will not be paid. The policy can be revived during the revival period of 2 years from the due date of first unpaid premium. On revival, the Guaranteed Addition will be paid from the year of revival or from the end of 4th policy year, whichever is later,

Sum Assured

Fund Value: The value of the fund at any time shall be equal to the number of units allocated multiplied by the Net Asset Value (NAV) of each unit in the fund.

Valuation Date: The Valuation Date shall be the date on which the Unit Price for each Fund Option is determined by the Company. The Unit Price is determined on a daily basis subject to the conditions. In case the valuation day falls on a holiday, then the exercise will be done the following working day. We reserve the right to value less frequently than every day in extreme circumstances, where the value of the assets may be too uncertain. In such circumstances we may defer valuation of assets until normality returns.

The **Appropriation price** shall apply in a situation when the company is required to purchase the assets to allocate the units at the valuation date as stated above. This shall be the amount of money that the company should put into the fund in respect of each unit it allocates in order to preserve the interests of the existing policyholders.

The **Expropriation price** shall apply in a situation when

the company is required to sell assets to redeem the units at the valuation date as stated as above. This shall be the amount of money that the company should take out of the fund in respect of each unit it cancels in order to preserve the interests of the continuing policyholders

Computation of NAV

Unit Price: The unit pricing shall be computed based on whether the company is purchasing (appropriation price) or selling (expropriation price) the assets in order to meet the day to day transactions of unit allocations and unit redemptions

When Appropriation price is applied: The NAV for a particular fund shall be computed as: Market value of investment held by the fund plus the expenses incurred in the purchase of the assets plus the value of any current assets plus any accrued income net of fund management charges less the value of any current liabilities less provisions, if any. This gives the net asset value of the fund. Dividing by the number of units existing at the valuation date (before any new units are allocated), gives the unit price of the fund under consideration.

When Expropriation price is applied: The NAV for a particular fund shall be computed as: Market Value of investment held by the fund less the expenses incurred in the sale of the assets plus the value of any current assets plus any accrued income net of fund management charges less the value of any current liabilities less provisions, if any. This gives the net asset value of the fund. Dividing by the number of units existing at the valuation date (before any units are redeemed), gives the unit price of the fund under consideration.

The policy administration charge and Fund Management Charge shall be continued.
